v25 MiniDome Camera
Modular • Perfect Protection • Professional Features

MOBOTIX

Product: v25

Public buildings and facilities

High-security locations

Unstructured ceilings

Competitive and Professional

The v25 MiniDome camera supports all MOBOTIX functions and can be equipped as a vandalism indoor camera. Included are a complete standalone video surveillance system, including SD card, NAS event recording, alarming, professional video management (VMS), MxActivitySensor, shock detection and optional video analysis with heat map and object statistics.

Complete Surveillance

The v25 includes the successful MOBOTIX 6-megapixel Moonlight Technology, the new benchmark in light sensitivity, to realize high quality video especially in lowlight situations (< 1 lux). The v25 is compatible with the 103° lens to cover a complete room without any blind spots.

Perfect Protection

The new v25 6MP model will be supported with two vandalism kits including a stainless steel protection ring and reinforced dome cover. The new vandalism kits provide complete case protection up to IK10, which is ideal for installations in public buildings, prisons and military premises.

Flexible and Fast Installation

Like all 6MP indoor models (i25, c25 and p25), the v25 can also be easily installed within minutes in any type of ceiling. The v25 supports all standard lenses (Ultra Wide to Distant Tele Lens) to always ensure the perfect solution for any indoor environment, installed either in ceiling or wall mount positions.

MxAnalytics inside the Camera

MxAnalytics as an option supports people statistics and heat map reporting without any extra PC. This functionality is part of the camera itself and therefore avoids any bandwidth traffic. It is perfect for indoor locations like retail stores, museums, shops, health care centers, universities and schools.

Optional Accessories

The new v25 can be equipped with an on-wall audio kit to realize two-way HD audio incl. microphone and speaker. The v25 is also compatible to the new MxTubeMount to be installed in unstructured ceilings like supermarkets, airports, logistics facilities etc. With MxTubeMount it is possible to always adapt to the right length of up to 2 meters suspended from the ceiling.

- **Professional Protection**
  Stainless steel with reinforced dome cover
- **Shock Detection**
  Push or impact generates an alarm
